

# Plant application form for gully stream restoration

This programme contributes to the Council's vision of a network of linked gully corridors planted in natural vegetation, stable stream banks, improved water quality, the provision of natural habitats for many local native species and a pleasant environment for Hamilton residents.

## CONTACT DETAILS

Contact Person	<i>Mr / Mrs / Ms / Miss / Dr</i>
Mailing Address	
Physical Address	<i>(If different from mailing address)</i>
Phone	
Email	

I own the site, OR  YES  NO

I have permission from the land owner to restore  
(Please include letter or email from land owner)  YES  NO

## PLANTINGS

The area I plan to plant this year includes: (This will help us select your plants)

	Approx. Area (sq m)	Wet (tick)	Dry (Tick)
Gully top			
Gully bank			
Gully bottom			

I would like glyphosate gel to help control privet, woolly nightshade and other weeds  YES  NO

I have a steep site near a stream and would like to be considered for geotextile matting and grass seed to help the plants get established and avoid surface erosion in the first years of planting.  YES  NO

## FURTHER INFORMATION

We will select plants suitable for the area you intend to plant, up to a maximum of fifty plants per site. It is intended that the plants will form a natural ecosystem in the gully or on the stream bank, and regular weed control will be needed particularly while the plants are getting established.

Your restoration may be monitored for research purposes (and to report back to our funders) by staff from the University of Waikato Centre for Biodiversity and Ecology Research. We will pass on your contact details to these staff so they can contact you to organise a visit to your property to view the restoration approximately six to nine months after planting.
